Novel microbial beta-glucuronidase genes and gene products used as reporter/effector molecule, as diagnostic tool, in positive selection, target molecules to specific cells and to detect and track linked genes. ť

Claim 2; Fig 4; 116pp; English.

WPI; 2000-647075/62. P-PSDB; AAB28406.

The present sequence encodes a microbial beta-glucuronidase (GUS) protein. GUS genes were obtained from six different genera: Enterobacter/Salmonella, Pseudomonas, Salmonella, Staphylococcus and Thermotoga. Microbial GUS can be used as a reporter/effector molecule for transgenic constructions and in in vitro diagnostic applications. It may also be used to generate sentinel plants that serve as bioindicators of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  environmental status. It may be used to generate transgenic insects for tracking insect populations or to facilitate the development of a bioassay for compounds that affect molecules critical for insect development (e.g. juvenile hormone). Secreted GUS may also serve as a marker for beneficial fungi destined for release into the environment. In animal systems, secreted GUS may be used to achieve extracellular detoxification of glucuronides (e.g. toxin glucuronide) and to examine conjugation patterns of glucuronides. Microbial GUS may also be used in traditional medical diagnostic assays, for drug testing, pharmacokinetic studies, bioavailability studies, diagnosis of diseases and syndromes, following progression of disease or its response to therapy. Microbial GUS has increased thermal stability, high turnover number and enzymatic activity. It is highly specific for the substrate and water soluble, and the substrates are stable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1689

                                                                        S
                                                                                                                                                                        The invention relates to a recombinant DNA construct comprising a provide for expression of a polynuclectide encoding a polynyceptide from a construct and a transformed plant comprising the recombinant DNA construct and a method of producing a cransformed plant comprising the recombinant DNA construct and a method of producing a crop plant comprising an improved property. The plant is a crop plant comprising an improved property. The plant is a crop plant comprises transformed plant with the crombinant DNA construct and growing the transformed plant with the recombinant DNA construct is useful for improving plant properties. The recombinant DNA construct is useful for producing a plant with tolerance, improved plant properties, e.g. improved cold, heat or drought tolerance, collerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of the cell cycle pathway with plant growth regulators, increased rate of phosphorus use and/or uptake, by modification of protein yield and/or content, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress condition. This sequence represents a bacterial polynucleotide used in the scope of the invention. Note: The sequence data for this patent did cont form part of the printed specification but was obtained in electronic format from USPTO at seqdata.uspto.gov/sequence.html.

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human conditions to diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorder, endocrine confections caused by virus, bacteria, fungi or parasite. The dithp confections caused by virus, bacteria, fungi or parasite. The dithp confecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polynucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or

The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp polynucleotide of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Local

                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                              The invention relates to targetted therapeutic comprising a therapeutic agent that is active in a mammalian lysosome, and a means for binding an extracellular domain of human cation-independent mannose-6-phosphate receptor in a mannose-6-phosphate independent manner. The invention is useful for treating metabolic diseases such as lysosomal storage disease, e.g. Gaucher's disease, Pompe's disease, Hurler's syndrome, Niemann-Pick's disease, mannosidosis, fucosidosis, Schindler's disease, mucolipidosis, cystinosis, Batten's disease, prosaposin, or infantile neuronal ceroid lipofiscinosis. The invention is also useful in gene

CC an extracellular domain of human cation-independent mannose-6-phosphate CC an extracellular domain of human cation-independent mannose-6-phosphate CC (M) is changed from isoleucine to threonine; and (i) binds the mutein CC with dissociation constant at least ten times the dissociation constant (CC with dissociation constant at least ten times the dissociation constant (CC for binding CM, Also described: (1) an underglycosylated therapeutic for binding CM, Also described: (1) an underglycosylated therapeutic CC fusion protein (FP) comprising a therapeutic domain and a subcellular can exterior surface of a cell, and upon internalisation of the receptor on can exterior surface of a cell, and upon internalisation of the receptor, compartment where the therapeutic domain to a subcellular compartment where the therapeutic domain to a subcellular compartment where the therapeutic domain to a subcellular compartment where the therapeutic domain to a subcellular compartment where the therapeutic domain to a subcellular compartment where the therapy and gene therapy. The P can be used in caryme replacement therapy, cell therapy and gene therapy. The P can be used for treating a patient by administering FP to the patient. GT can be used for treating a patient by identifying a caryment synthesising GT comprising a therapeutic agent that is therapeutic agent that is therapeutic agent that is compared to the patient, where the targeting moiety is dentified by screening a nucleic acid or peptide library. GT is useful for treating moiety disease, Gaucher disease, Krabbe disease, Schindler disease, Hurler constant engagement of the sease, Batten disease, Schindler disease, infantile carid storage disease. Batten disease, Schindler disease, infantile carid acroad disease. Batten disease.
sialic acid storage disease, Batten disease, infantile neuronal ceroid lipofuscinosis, Ehlers-Danlos syndrome type VI and congenital disorders of glycosylation. The present sequence is used in the exemplification o

              The invention relates to a targetted therapeutic which comprises a therapeutic agent that is active in a mammalian lysosome and means for binding an extracellular domain of human cation-independent mannose-6-phosphate receptor in a mannose-6 phosphate-independent manner. The targetted therapeutic, therapeutic fusion protein and methods of the invention are useful for treating lysosome storage diseases. The invention is also useful in gene therapy. The present sequence is a fusion DNA used in the exemplification of the invention. This DNA encor a fusion protein which comprises a signal peptide sequence, a human mature beta-glucoronidase (GUS) sequence, a bridge of three amino acids
                                                                                                                                                                                                                                                                                                                                    New targeted therapeutic comprising a therapeutic agent that is active mammalian lysosome, and means for binding a domain of human cation-independent mannose-6-phosphate receptor, useful for treating lysosome
                                                                                                                                                                                                                                                                                                                   mammalian lysosome, and means for independent mannose-6-phosphate storage disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         misc_feature

                                                                                                                                                                                                                                                                                                                                                                                                                                expression vectors and virions, which include genes coding for enzymes defective or missing in lysosomal storage disease (LSD). AAV is useful in the manufacture of a medicament for treating lysosomal storage disease e.g., mucopolysaccharidoses VII (MPS VII). MPS VII (Sly Syndrome) is due to the deficiency in the lysosomal enzyme beta-glucuronidase (GUS) which aids in the breakdown of glycosaminoglycans (GAGs). AAV is used in gene therapy. The present sequence is human GUS DNA. This sequence is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Use of recombinant adeno-associated virus, comprising gene enco protein defective or missing in lysosomal storage disease, in t manufacture of a medicament for treating the lysosomal storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; adeno-associated viral expression vector; AAV; gene lysosomal storage disease; LSD; mucopolysaccharidoses VII; Sly syndrome; beta-glucuronidase; GUS; glycosaminoglycan; G
                                                                                                                                                                                                                                                                                                                                                                     Sequence 1956 BP; 437 A; 533 C; 563 G;

                                                                                                   Ś
                                                                                                                                                                                                                                                                       CC DNA chip analysis as given in the specification, and comparing the expression level to an expression level in an unactivated GC, where CC differential expression of Gs is indicative of GCA. Also included are CC expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a CC tissue, an altergic response in a subject, exposure of a subject to a CC pathogen or sterile inflammatory disease using the gene expression of the gene is indicative of Grant the level of CC expression in a sample of the tissue of gene (s) from Gs, where the level of expression of the gene is indicative of inflammation; (4) treating CC (M5) an inflammation (especially chronic) in a tissue, an altergic response in a subject to a pathogen or sterile inflammatory disease, by detecting the level of cof expression of the gene is indicative of inflammation; (4) treating CC (M5) an inflammation (especially chronic) or in a tissue, an altergic response in a subject, exposure of a subject, an altergic creponse in a subject, exposure of a subject to a pathogen or sterile inflammation of the gene (s) from Gs in the tissue. M1 (c) is useful for detecting GCA, M2 is useful for modulating GA; M3 is useful for screening an agent capable of modulating GCA preferably in an C1 inflammation in a tissue, an allergic response in a subject, capable of modulating GCA preferably in an C2 (especially chronic) in a tissue, an allergic response in a subject, caposure of a subject, a pathogen or sterile inflammatory disease (e.g. C2 postially chronic) and m1 useful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, caposure of a subject, a pathogen or sterile inflammatory disease (e.g. C2 postially chronic) and m1 useful disease; also bacterial inflammation in a fissue, an altergic response in a subject, capable of m2 postial disease. C2 postial disease (e.g. C2 postial disease) crohn's capable of m2 postial disease (e.g. C2 postial diseas

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC subject. the method comprises determining, in a sample from the subject, the level of at least one polypeptide, where a higher level of the CC polypeptide compared to the level of the polypeptide in a subject free of CC cancer is indicative of cancer. The polypeptide is selected from any of the polypeptides encoded by the polynucleotides listed in the CC specification and polypeptides which are at least 70% homologous to the CC polypeptides. The method of the invention has cytostatic activity, and CC may have a use in gene therapy. The method is useful in identifying CC markers specific for one or several types of cancer, depending on the CC tissue origin, which may be used in numerous diagnostic and prognostic applications as well as cancer type-specific targets for therapeutic intervention. The compounds that modulate the activity of a tumour suppressor gene are useful in the treatment of cancer or as anti-cancer cross anti-cancer drugs. The present sequence represents a polynucleotide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1333
```

The invention relates to a method of predicting clinical outcome f patient diagnosed with cancer by determining the expression level or more genes, or their expression products, selected from p53BP2, cathepsin B, cathepsin L, Ki67/MiB1, and thymidine kinase in a car tissue obtained from the patient, normalized against control gene compared to the amount found in a reference cancer tissue set. The methods are useful for predicting clinical outcome for a patient diagnosed with cancer, classifying cancer, and predicting the likelihood of long-term survival of a breast cancer patient, or a patient diagnosed with invasive breast cancer or with estrogen receptor (ER)-positive invasive breast cancer. This sequence corresponds to a gene sequence whose expression is detected by the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 2191 BP; 497 A; 589 C; 630 G; 475 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                   The present invention relates to a polypeptide comprising an CC antiangiogenesis polypeptide region linked to a therapeutic protein or polypeptide region, or a diagnostic protein or polypeptide region. The polypeptide comprising an antiangiogenesis polypeptide region or the nucleic acid encoding the polypeptide comprising the antiangiogenesis polypeptide region or the polypeptide is useful for diagnosing or treating angiogenesis-dependent cc diseases or cancer. Angiogenesis-dependent diseases include age-related macular degeneration, artherosclerosis, angiofibroma, neovascular cc glaucoma, arteriovenous malformations, nonunion fractures, arthritis, cc syndrome, psoriasis, corneal graft neovascularisation, pyogenic granuloma, delayed wound healing, retrolental fibroplasia, diabetic retinopathy, scleroderma, granulations, haemangioma, trachoma, haemophilic joints, vascular adhesions, hypertrophic scars, multiple sclerosis, restenosis or obesity. The present sequence is a coding sequence shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide comprising an antiangiogenesis polypeptide region linked to a therapeutic protein or a diagnostic protein, useful for diagnosing or treating angiogenesis-dependent diseases e.g. cancer, lupus or

CC This invention relates to a novel viral vector comprising a beta-
CC catenin/bipartite T-cell factor (Tcf)-responsive promoter construct which
CC contains a first promoter region having a copy of Tcf/LEF-1 binding site
CC operatively linked to a second promoter region, and a nucleic acid
CC sequence, where the first and second promoter regions are operatively
CC linked to target nucleic acid sequence. The invention may be useful for
CC the development of compounds with a cytostatic activity, through action
CC as beta-catenin activity inhibitors, or for gene therapy. The invention
CC may be useful for treating an individual with colon cancer which is
CC metastasised to the liver. The treatment involves administering the
CC vector of the invention where the nucleic acid sequence encodes a
CC therapeutic polypeptide or thymidine kinase, a prodrug and chemotherapy,
CC radiation, surgery or gene therapy to the individual. The present
CC sequence is that of a therapeutic gene which may be used in the vector of
CC the invention for the treatment of an individual with cancer.

The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a mRNA reference sequence for a 50 mer oligonucleotide marker for diagnosis and monitoring of allograft rejection and other disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Diagnosing or monitoring transplant rejection, e.g. heart, kidney, live pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual, comprises detecting the expression level

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
